Education

- **Stanford University** — Palo Alto, CA
  Bachelor of Science in Computer Science; 4.06 GPA — *Sept. 2018 - June 2022(expected)*
- **Henry M. Jackson High School** — Mill Creek, WA
  Valedictorian; 4.00/4.00 GPA; President/Founder of Mu Alpha Theta, Quiz Bowl Captain — *Sept. 2014 - June 2018*

Experience

- **Microsoft** — Redmond, WA
  Software Engineer Intern — *June 2019 - Sept 2019*
  - **Outlook Web**: Developed new drag-and-drop functionality to integrate Outlook Mail and Calendar into a unified communications and time management platform. Shipped the feature at the conclusion of my internship to Outlook's worldwide enterprise release.
- **Center on Food Security and the Environment - Stanford University** — Palo Alto, CA
  Machine Learning Research Assistant — *March 2019 - June 2019*
  - **U.S. Crop Type Hindcasting**: Wrote machine learning models to predict crop types from satellite data and weather covariates in order to facilitate longitudinal study of food security trends.
- **Voya Sol** — Palo Alto, CA
  Lead Software Engineer — *Jan. 2019 - June 2019*
  - **Network Architecture Design**: Designed a peer-to-peer solar energy sharing system for communities in Zimbabwe where users can harness solar energy and trade it on a market with their neighbors.
  - **PCB Design**: Developed a highly-scalable charge controller for a solar-powered micro-grid system for urban customers in Zimbabwe to gain consistent 24/7 access to electricity. Implemented these technologies in 16 early-adopter communities in Zimbabwe over the summer.
- **University of Washington** — Seattle, WA
  Computational Biology Researcher — *June 2018 - Sept 2018*
  - **Molecular Information Systems Laboratory**: Developed deep learning models to identify the amino acid composition of proteins passed through nanopore sensors.
  - **Synthetic Biology Lab**: Used CNNs trained on a proprietary synthetic isoform expression dataset to predict alternative polyadenylation from genomic data.

Projects

- **Locale (2019)**: Website that helps people who are relocating to a brand new city find the ideal neighborhood for them to begin their home search. (locale.dhruvikparikh.com)
- **Sol-Gel Derived SPEEK/Silicon Dioxide Composite Membrane (2018)**: A novel vanadium redox flow battery mechanism developed for more efficient solar energy storage on the power grid.

Awards and Honors

- **2019 Forbes 30 under 30**: Energy
- **2018 BASES Social Impact Case Competition**: 1st Place
- **2018 Intel International Science & Engineering Fair**: Grand Award Winner ($50k Scholarship) and Best in Category
- **2017 Research Science Institute**: Top Scholar
- **2018 U.S. Presidential Scholarship**: Semifinalist
- **National AP Scholar**: 2-time Awardee
- **2017 Washington State Science and Engineering Fair**: 1st Place
- **2016 Washington State Mathematics Competition**: 1st Place

Skills

- **Languages**: Python, C++, JavaScript, C, Java
- **Technologies**: React, Tensorflow, SciPy, Django, Spark, TypeScript, MobX, Firebase
